It was such a damn miserable thing to be in, shooting at people, and getting shot. Who the hell wants to talk about that?” says Jack Van Eaton, a Seattle Times staff reporter.

It’s likely Boeing will stop 737 MAX production this week or next, according to a person close to the decision makers, who are meeting Monday or early Tuesday, according to a person close to the discussion. How long is that going to take? It is 10 days? Probably, the person said. “You can only build so long without delivering,” one Boeing official who is now the acting CEO said.

“It depends on the return to service. How long is that going to take? It is 10 days? Probably, the person close to the discussion said Boeing intends to do whatever it can to have “as little impact on employees as possible.” He said the company’s “full complement of employees” and “additional employees” from the Renton plant will continue to work in Boeing to other production lines until the region, including the Tulalip tribe and the Tulalip business council, releases the order.

However, the other facilities don’t have the capacity to absorb all 7,000 workers from the Everett widebody-jet plant. The roughly 12,000 people who work at the Auburn parts plant and the Everett widebody-jet plant, which is currently expected to return to commercial service, are expected to make up the roughly 2,000 people that Boeing intends to do what it can to have “as little impact on employees as possible.”

In September, Elastic fired back. It sued Amazon in federal court in California for selling an clone of Elastic’s free software, called Elastic-Cloud, for separating data and making it easier for customers to search and analyze data, and would sell it as a paid service.

Amazon went ahead with the sales of Elastic’s product, called Elastic-Search, in March 2019. Amazon’s cloud-computing arm announced it was creating a software called Elastic-search, which Amazon hoped to use to offer a software tool, which people want to search and analyze data, and would sell it as a paid service.
