If the Earth warms any more, we’re all in peril

U.N. report laments damage at just 2.5, 2 degrees more

**Why half a degree is a big deal**

The Earth has already warmed 1.8 degrees Celsius (3.2 degrees Fahrenheit) since the 1880s. Yes, a major new United Nations report has looked at the consequences of warming the Earth by 2 degrees and 3 degrees Celsius. But a half degree is not quite so

**In real life, a winter will turn to spring.**

The New York Times

A winter will turn to spring in 2017. So a major new United Nations report has looked at the consequences of warming the Earth by 2 degrees and 3 degrees Celsius. But a half degree is not quite so

**ECONOMIC NOISE: Nobel winners show need for cooperation to stop warming a half degree.**

The New York Times

A winter will turn to spring in 2017. So a major new United Nations report has looked at the consequences of warming the Earth by 2 degrees and 3 degrees Celsius. But a half degree is not quite so
